

COS202 – FRIDAY TO MONDAY ASSIGNMENTS – 01/07/2026

In place of our meeting on Friday (tomorrow), 2nd July, have this assignment done between today and Sunday (for cos202). I won't be available tomorrow for the Friday (extra class/fixed) lecture. For next week classes, another lecturer (Mr. Ayegbusi) will be taking turn for the whole of next week.

For those offering SEN202, please note that I will also not be coming on Monday (7-9) for SEN202, rather, Mr. Jegede will be coming on Tuesday. You may wish to persuade him for the added/fixed class (either on Thursday 4-6pm or Friday 9-11 or Monday 7-9 as the case maybe). The two of us will be taking turn week after week but for me, no need of stressing myself for 7-9am lecture or deep 4-6pm lecture. I will prefer our usual Tuesday 1pm and perhaps add-on Friday 9am.

Alright, COS202 here we are 🙌

- 1) Create a personal GitHub account (if you do not have one already) and create a repository named COS202 or any related name, or use any existing one that you have. The repository will be used throughout the semester for storing and managing your practical works, assignments, and projects.
- 2) Using PYTHON programming language, develop an interactive and well-designed screen MATHEMATICAL CALCULATOR (MC) programme containing components such as +, -, /, \, *, ^, %, C (Clear), OFF etc. (NB: It's a simple calculator not complex scientific one).
- 3) CGPA is not something that should constrain you to visiting AVERS at all time – this is something you can have inside your pocket and carry all around, running and checking it at your will. Using the powerful provision of selection control statements in PYTHON, develop a PERSONAL POCKET CGPA Calculator (PPC).

Upload the complete source codes and documentations (screenshots, outputs, reports etc.) of solutions 1 & 2 to your GitHub repository, and submit the repository URL to: ajayiprogrammer@gmail.com

For external documentation however, you will still have to print out the sources and object listings and embed (put inside your manual). The submission for that of the manual will be during the test of Wednesday 22nd.

Happy coding weekend in Jesus name!
